
CS 192 AY 2014-2015

General Programming Standards and Guidelines Code Review Checklist

Reviewer's Name:	Camille Bacister, Mika Lenon	Peer Review Date:	
Project Name:	Watudu: Event Sharing Mobile App (Android)	Project ID: (if applicable)	
Developer's Name:	Mika Lenon, Camille Bacister	Sprint Number	One
Review Files & Source code			
Code Approved			

This checklist is to be used to assess source code during a peer review. Items which represent the code being reviewed should be checked off.

Refer to the *Android and Java General Programming Standards and Guidelines* (<https://source.android.com/source/code-style.html>) document for more complete descriptions and examples of the items listed below.

Place a check mark if the code complies with the criteria. If not, place comments at the remarks column.

1. License

Criteria	Comply	Remarks
License exists at the top of the code	/	License is placed in a separate text file since there are a lot of files of codes and still under construction.
License contains the name of the author	/	
License contains the following: "This is a course requirement for CS 192 Software Engineering II under the supervision of Asst. Prof. Ma. Rowena C. Solamo of the Department of Computer Science, College of Engineering, University of the Philippines, Diliman for the AY 2015-2016".	/	

2. Code History

Criteria	Comply	Remarks
Code History appears after the license of the source code.	X	
Code History has been updated accordingly based on name of programmer, change date and change description.	X	This is one of the criteria that we accidentally over-looked so we weren't able to apply it to the code. We are also so lost in navigating and playing with the interface forgetting to do this.

3. Internal Documentation

Criteria	Comply	Remarks
A comment block exists after the Code History containing the following information: file creation date, development group, client group and a brief statement of the purpose of the software in the file.	/	
Each method in the file is preceded by a comment block which provides the following information: method name, routine's creation date, purpose of the routine, a list of the calling arguments (their types and what they do), a list of required files and/or database tables, and return value.	/	Some attributes are repeating so the developer's didn't place it again in some places/
Indentions are 5 spaces.	/	
Inline comments are found at the top of the statement using '/*' and '*/'.	/	Comments in the xml file is placed in '<!--' '-->' manner since '/*' '*/' is not applicable
Bracketing of block statements follows the following format: if (){ statements; }	/	Format is used in switch case.
Exceptions are being handled appropriately.	/
